

+CityxChange

Smart Cities and Communities

DESCRIPTION

The +CityxChange project sees seven aspiring cities from across Europe join forces in creating improved city-living conditions through the application of smart technologies and renewable energy sources.

Through the execution of 11 demonstration projects, the cities aim to address environmental, spatial, social, technical, economic, regulatory and legal aspects that enable the establishment of Positive Energy Blocks/Districts (PEB/D). The demonstration projects address developmental and societal needs, bringing local government, the community and key stakeholders together to implement interventions improve quality of life, make cities more climate-friendly and productive, and facilitate business development.

FAC's contribution to the project includes:

- Development of a Monitoring and Evaluation (M&E) framework and refinement of project Key Performance Indicators (KPIs) to measure the performance of implemented interventions.
- Development of a M&E online dashboard to capture, manage, visualise and report on KPI data.
- Co-creating and managing a series of citizen engagement workshops and events that trial and test each of the project innovations and solutions.
- Assisting project partners in the dissemination and communication of project reports, solutions and services, ensuring that the technologies and processes created can reach a wider audience.
